

The sound caused by plucking a musical string
depends on it's length
there's a connection between harmony and numbers
there is a hidden sense

The interval of an octave is rooted in the ratio 2:1
that of the fifth in 3:2
that of the fourth in 4:3
and that of the whole tone in 9:8

(chorus)

See the governing forces in the cosmos
as in this song they can be found
the whole can be thought of as a giant symphony
you represent the sound

Pulled down to earth by that everything became limited
Man pulled down to earth by that everything became limited
You cannot hear the whole melody,
yet you're the sound of symphony (2x)

Have you lost your ears? rediscover lost continents
Be like a wandering bird with an intrepid heart
You may remember
the interconnectedness

Have you lost your sight? rediscover lost continents
Be like an inquiring child with an innocent mind
you may remember

(chorus x2)
