

The time is drawing nearer
Comet endures her eternal wandering
She gets over, glance like the falling Star
Unfold her lucent tail like a peahen under the Sun
Admired that she passes the Earth
Live and enjoy!

Meeting millions of stars
Travel through the space
Nascent by contraction of interstellar mass
Forming, growing and fading...
Star drift forms the rising system
The old dream is realizing
Creating noble elements from the worthless trash
Here comes the moment of candescence
The moment when she inflames is coming
And commence the life

Three milliard degrees fever
Grow up and grow stronger
Swell and get colds
Burst and contract
Collapse and scatter it's mass
Spectacular cosmic rain
Nebula in interstellar space
Is the memorial of the star
Exhausted, she will collapse into the Black Hole
Or explode like supernova
Her scattered mass
Serves as a building stone
For next generation of stars

The hairiest of all the hairy sisters
Is going to chop apart our strenuous history
Illuminate us with her fulgent flash
Embrace our human experience
