

Severe Renal Infection

Amputated Genitals

A patient with severe infection
A poor woman
Who I inject a big dose of adrenaline
Occasioning strong lesions

Convulsions and severe stomachache
Pain in the intestines
Lethal symptoms in their weak body
The arterial pressure increases

The blood doesn't irrigate normally
Her extremities are gangrened
Her left kidney is infected too
The infection is expanded in her body

She is in shock and me too
Then I amputate her extremities
Her hands and feet
Grinding all her flesh

I only want to cut her flesh
Feeling her blood
Her veins are destroyed
One strong hemorrhage

A lot of bandages full of blood
She enters in a profound coma
She is in an inert state
I am the god and master of life

I have the power over life and death
Killing a patient without permission
I am going to continue until
The whole world dies
