

Colonic Villus Biopsy Performed On The Gastro-intestinally Incapable Cattle Decapitation

Obese pathetic creature
Exaggerated, consuming anatomical features
years of sloth and unfit diet
have created this gastrointestinal nightmare
Biopsy performed
1,000 strains of cancer
goiters, tumors, rectal decay
anally emaciate
Dire need for colonics
advanced restructure now gives way
pressurized antibacterial spray
excess remains for a dish to sautee
Inept of happiness
incapable of a normal existence
ever ingesting abcess
malignant offal-cavern of human cess
Biopsy performed
1,000 brains no answer
superceding our knowledge of anatomy
with the ferocious virulence of pathology
All attempts have failed-
we're losing him
last ditch effort for preservation
the remains are felched or munged
and spat out into a jar of formaldehyde
ever ingesting abcess
7 years of fecal decay
eaten from inside and withered away
cauterized rectum of colonic waste
you are the victim
and embarrassingly you die
exposed blackened innards of digestion
closed casket funeral time

Biopsy hypothesis:
subject neglected by life
superceding our knowledge of anatomy
with the ferocious virulence of pathology
ever ingesting abcess
malignant offal-cavern of human cess
goiters, tumors, rectal decay
anally emaciate
culinary...
scatology...
disease....
on feces I feed
Dire need for colonics
advanced restructure now gives way
and emptied into the hands of a physician
a gastro-intestinal plague
survives.
