

# Humanure

## Cattle Decapitation

The human body, in its systematic nature,  
has 3 primary objectives:

1. Procreate
2. Food Intake
3. The elimination of waste

This is the human equation  
One half is feces, the other mammal  
The human as shit.

This is what you've become  
The end result of human stupidity  
Another mesh of flesh with no dignity  
A solid waste with dull neuronal activity

2000 years from now  
they'll discover our copralite  
learn of disease and parasite  
enough to know what made us tick  
enough to make them sick

anatomy...  
scatanthropology...  
the study of man

Micturate - here's to your health  
Defecate - upon the self  
Felch - the goddamn sphinct and  
Gurgle - it's disgusting contents

Playing king of the hill  
On a mountain of manure  
On a planet called earth  
Mirroring what we're worth

We are nothing but a failure  
Evolution took a shit  
In my heart, through these eyes  
Humankind in its own shit resides.

2000 years from now  
they'll examine our copralite  
gain perspective and insight  
enough to know what made us tick and  
that we're made of shit
