

# Repangaea

## Cephalic Carnage

Superreligious nation states split with bilateral neglect  
Pride division, dissent and descent  
Obstruction and brutality  
Destructive vicious traits of our outdated paradigm  
Panic and hysteria. All systems down  
The cleansing begins  
With us deceased  
Track marks of our devastation pervade in the wake  
Brimming with the wreckage of dominance and greed  
Amaurosis at the precipice  
Observers to the obliteration hover above  
Wormholes spiral in Norwegian night skies  
Commencing a global landmass reconfiguration  
Coasts obliterated by ocean wide tsunamis  
IntraQuakes and Super Volcanos awaken an ecosystem phoenix  
Melting empires into molten pools of searing pus  
Gushing from freshly peeled metropolis scabs  
A fertile amalgam of historic finality  
The blood of the earth  
Bleeds on the ocean floor  
Polluting the fragile sea  
The plastic island melts once more  
Dismal signals from the dark side of the sun  
Sends a ultra violet spike  
Spawning extinction on the Mayan night  
First the phytoplankton disappeared  
Animalian suicide  
Evolution's dawn is near  
Thrusting every fault line  
Upwards towards the sky  
An augmented continental consciousness unveils  
A self-aware conglomeration of congealing earth  
Sealing hybrid cars and oil tankers side by side  
Into a time vault of decomposition  
Human fossil fuels  
Progenitor bone diesel stews  
Swallowed far below the neocrust  
Drilling exploits of a future race  
Remnants of culture dissipate  
Our legacy remains in the radio waves  
Of vibrational evidence  
Undulating to the furthest echoes of space  
For celestial beings to perceive  
The imminent threats of the deceased  
And the victims of their greed  
Addicted to gluttony  
Advertisements speak  
Volumes to their needs  
Products soon to sit in landfills for e-ternity  
Atmosphere opaque  
Billowing clouds showering the earth  
With electrocuting rain  
Conductive spheres of toxic waste  
Malignant wreckage  
Balance returns as  
Tropical trade winds shift and the newly  
Decreased shorelines create a colossal central desert

Decelerating Darwinian momentum  
Long enough to recover from damage done  
Slowly, micro bacteria evolve to  
Feed on the oceans of petroleum  
Devoid of plant or animal life  
The cosmic serpent still slithering  
Finds its way through  
The Supercontinent Cycle
