Fermented post-mortem Disgorgement

Haemorrhage

Coagulated gore of cadaveric festers
Stagnated for days in your putrid intestines
Fermenting juices of hepatic secretion
Soured bile foam hastens ulceration

Decomposing visceral wrap Suppuration flows from each scab Gangrened innards, rotten and grey Fungus grows upon decay

Organic decadence by internal necrosis Corporal purulence foments microbiosis Abdominal cavity swollen by fumes Oesophagus numb, choked by grumes

Liquidized vomit of rot
Disgorging black digestive clot
Corrosive stomach contents
Necro-emesis takes place
The carcass spew, on the mortuary slab
This posthumous legacy, in the ultimate spasm
