

Megasound

Welcome to the Scantraxx University

An extreme sensation of pressure at the eardrums

At the beginning of the 21st century

A professor of the Scantraxx University

Discovered a sound that travels through solid ground

It has been known to cause the need to dance in humans

Since it is not conscientiously perceived, it can make people feel vaguely

That supernatural events are taking place

Such tones cease being heard as a musical tone

Unless they are boosted greatly in volume

This particular sound is referred to as: the megasound

A sound so profound

Welcome to the Scantraxx University

The megasound

Professor in research, Willem Rebergen

Received a royal honour for taking part in this excellent inquiry

Innovation in the science of sound
