

Research has proven that exposure
To low frequency sound can cause
A variety of physiological effects
Many of them adverse ones
Such as shivering, anxiety and breathlessness

In reporting on the project
The issue of extremely low frequency
Impact on human health has been raised
Electromagnetic waves can interfere
With brain activity

We're coming for you

In reporting on the project
The issue of extremely low frequency
Impact on human health has been raised
Electromagnetic waves can interfere
With brain activity

Subsonic sounds
