## Lucky Day

## **Kalan Porter**

You close the door without a sound You need to get out of this town

You believe There would be no end When one door closed Another opened

When the darkness cleared And the sun came up I looked at you And the damage done You made it through You found your way That was my lucky day

I found loneliness in company Seduction a catastrophe And you don't know who you want to be But you need to get out of the city

You believe There would be no end When one door closed Another opened

When the darkness cleared And the sun came up I looked at you And the damage done You made it through You found your way That was my lucky day

When the wind was wild And stole your breath And you thought that you had nothing left You made it through You found your way That was my lucky day

You're much too tired To be driving at night You could loose yourself In the pale streetlight And the signs on this road They just ain't right They won't get you out of this

When the darkness cleared And the sun came up I looked at you And the damage done You made it through You found your way That was my lucky day When the wind was wild And stole your breath And you thought that you had nothing left You made it through You found your way That was my lucky day

That was my lucky day
