We Could Be in Love

Lea Salonga

Be still, my heart Lately its mind is on its own It would go far and wide Just to be near you

Even the stars Shine of it bright I've noticed When you're close to me

Still it remains a mystery

Anyone who's seen us Knows what's going on between us It doesn't take a genius To read between the lines And it's not just wishful thinking Or only me who's dreaming I know what these are symptoms of We could be in love

I ask myself why I sleep like a baby through the night Maybe it helps to know You'll be there tomorrow

Don't open my eyes I wake from the spell I'm under Makes me wonder how

Tell me how I could live without you now

And what about the laughter The happy ever after Like voices of sweet angels Calling out our names And it's not just wishful thinking Or only me who's dreaming I know what these are symptoms of We could be in love

All my life I have dreamed of this But I could not see your face

Don't ask why two such distant stars Can fall right into place

Oh, it doesn't take a genius To know what these are symptoms of We could be... We could be... We could be in love We could be in love
