

Cystic Fibrosis

Malignancy

Inherited disorder manifests with no cure
Defective genes carry this abnormality
Cell clusters fail to create necessary juices
Deficient pancreatic enzymes prohibit the digestive process

Weakling newborn not capable of fending for itself
Clogged passages instill upper lung infection
Obstruction of intestinal glands
Foul smelling stool blocks the bowel
Gradual liver atrophy impairs insulin production

Infant ravaged with diabetes
Medicine administered to stabilize blood sugar
Thick mucus blocks the exocrine glands
Respiratory contamination spreads within
Debilitating illness cuts chance of survival
Innocent life ended in the name of disease
