## **Virulent Contagion**

Malignancy

Contagious agent, virus contaminates Decay induced bacteria propagates Crippled torsos bludgeoned smashed in face Disease produced exhibiting virulent trait

Environment ideal incubation Conditions viable for evolution Harboring the sickness, ravaged from within

Trunk encrusted in gore Blistering surface, pus seeps from pores Infection escapes the body Leaking cavity expels impurity

Deprivation extrudes poison out Nutrients stripped from decomposed Emerging death, waiting to consume Pestilence transmission

Direct contact will infest Pathogenic germs will taint Ghastly product erosion Carnage that should inter Survival will not occur Bacteria propagates Spreading poison culminates

Contagious agent, exhibiting virulent trait Decay induced, virus contaminates Body consumed, infected with the strain Internal feasting, increase death rate Harbor sickness
