

High Road

Mastodon

You let the wind take us down
You let the storm come and wipe us out
I saw the fox stomp you out
I saw the ocean come take you under

I have my bullet stuck in your mouth
I have you screaming for your last breath, yeah
I shoved the boat deep inside
I still waiting for the devour

You take the high road down
I take the ground below you
You take the high road down
I take the ground below

You are the one nobody likes
You are the plague that was brought here by rats
I like to hunt you, lets fight
Watching you fade out and never come back

You take the high road down
I take the ground below you
You take the high road down
I take the ground below

You take the high road down
I take the ground below you
You take the high road down
I take the ground below
