

(I wish you were mine)
(I wish you were mine)
(I wish you were mine)
(I wish you were mine)
(I wish you were mine)

These symptoms suggested that our evolution,
I suppose from the animal kingdom into human kingdom
Itself was catalysed or
Or triggered by our encounter with these
Hallucinogenics, and

Yes, we are an ape with a symbiotic relationship
To a mushroom
And that has given us self reflection
Language
Religion
And all the spectrum of effects that flow from these things

And one can only wonder how
These hallucinogens might effect our future evolution as well

They have brought us to this point
And as we make our relationship to them conscious
We may be able to take control of our future evolutionary path
