

# Monolith

Mudvayne

(I wish you were mine)  
(I wish you were mine)  
(I wish you were mine)  
(I wish you were mine)  
(I wish you were mine)

These symptoms suggested that our evolution,  
I suppose from the animal kingdom into human kingdom  
Itself was catalysed or  
Or triggered by our encounter with these  
Hallucinogenics, and

Yes, we are an ape with a symbiotic relationship  
To a mushroom  
And that has given us self reflection  
Language  
Religion  
And all the spectrum of effects that flow from these things

And one can only wonder how  
These hallucinogens might effect our future evolution as well

They have brought us to this point  
And as we make our relationship to them concious  
We may be able to take control of our furute evolutionary path
