

# Astronauts

Rachel Platten

Let's meet up far away...  
Where astronauts and gravity have opened up the atmosphere  
We'll be so safe up here  
Navigating the space  
We'll create our own star  
I'll name it after you  
We'll be so calm up there  
Fly around the quite air  
The sun will pull us round again, inhaling and onbitting  
Our great planet, you'll fit on the tip of your thumbs  
You'll say I've finally see how time stops  
And everything hurts us drops half

I'll be watching you out when everything is gone  
Let the world disappear there, our places up here  
We can high! We'll be save up high!  
Somewhere only we can find

And all it save from being called out or velveted  
And people change all around pew the violence  
And score rescue up planet that been thrown away  
You name it after me  
Cause after all we're only one trying pain away  
For resting in infinity or darkness for some brighter place  
Let's not waste one more second for caring about  
Try to figure out what loves write  
Cause that can take away your mind

I'll be watching you out and everything is gone  
Let the world disappear there, our places up here  
We can high  
Somewhere only we can find  
I'll be watching you out when everything is gone  
Let the world disappear there, our places up here  
We can high, We'll be save up high  
Somewhere only we can find

Mine suddenly the stars got flash light  
Universe will make you eyes shine  
Can't you feel away that time stops  
Everything that hurts drops off

I'll be watching you out when everything is gone  
Let the world disappear there, our places up here  
We can high  
Somewhere only we can find  
I'll be watching you out when everything is gone  
Let the world disappear there, our places up here  
We can high, We'll be save up high  
Somewhere only we can find
