

# Telescope

Starset

You're out there  
I hear you calling from behind the star fields  
I feel you  
Radiating energy like eternal northern lights

Far from the sun  
Where no one knows  
I've watched you from  
My telescope

I will travel the distance in your eyes  
Interstellar light years from you  
Supernova: we'll fuse when we collide  
Awaking in the light of all the stars aligned

I see you  
Washing over me across the sky  
Overcoming  
Projected on my eyes eternally  
I find you in the night

Far from the sun  
Where no one knows  
I've watched you from  
My telescope

I will travel the distance in your eyes  
Interstellar light years from you  
Supernova: we'll fuse when we collide  
Awaking in the light of all the stars aligned

I will find you...

I will travel the distance in your eyes  
Interstellar light years from you  
Supernova: we'll fuse when we collide  
Awaking in the light of all the stars aligned
