

## Red Nova Ignition

Sybreed

Accretion of stellar matter collapsing  
Particles crushed at excessive speed  
The Protostar, pressured by gravitation forces  
Awaits it's ascent to radiance

Red nova ignition, phase one:  
To set ablaze the cosmos in all directions  
To combust electron discharge  
And dissipate the greatest void

The solar newborn shall be crowned  
To reign over new, pristine worlds  
And inundate their immaculate crust  
With heavy radiations

Spiraling, hydrostatic equilibrium  
Photon winds diffusing light  
Explosive, universal space/time commotion  
Following a scheme divine

Repelling darkness, illuminating the canvas of all creation  
Destroying eons of nonexistence, the monad has come to life

Submerged in the fire burning the vault of heaven  
The celestial scion shines upon the universe frame
