

Beyond Genesis

The Alchemist

The past is open,
but the future still hides.
Natural selection,
the strongest will survive.
Planetary process of
evolutionary change.
Nature's chosen aspects from
hereditary range.

Perspectives of truth,
Artificial selection,
Rather than supernatural intervention

Could life possibly be
as simple as your revelation
because we have evolved
there is no myth of creation.
We may have been created
But not from two single beings
Eternal genetic process of mutating genes.
