

Dreaming Schematics

The Contortionist

Interrupting phases of transduction
Digital synthesis encodes ensemble's work
Synthetic cortisol travels white matter tracts
Building new crosstalk revolutions
Receptors show resistance to our changes
Diverting channels to new activations

Mechanics of the wave converge
Hidden in the vacuum is the answer to our apoptotic fate
It will surely change the world

The memories are communicating between two states
Symbiotic system, diverted from the vacuum
Manipulating neural networks
Moving forward with this work, desire controlled by logic
Moving forward with this work, desire controlled by logic
